SENTINEL

Get AI-based protection from phishing and account takeover.

Introducing Sentinel

Sentinel detects threats that traditional email security systems can't. It integrates directly with Microsoft Office 365 APIs to detect attacks coming from both internal and external sources. It uses artificial intelligence to detect signs of malicious intent and deception within every email with virtually no IT administration required.
OVER £9 BILLION HAS BEEN LOST TO SPEAR PHISHING AND ACCOUNT TAKEOVER.

Key Benefits

Block threats already in your inbox: Traditional email filters only filter incoming emails. Sentinel integrates directly into Office 365 to find threats inside your mail system that security gateways can't see.

Stay a step ahead of attackers with AI-based threat detection: Sentinel learns your business's unique communication patterns to detect personalized fraud in real-time to protect against business email compromise and account takeover.

Stop wasting time managing static security rules: Sentinel is truly a zero-administration tool. It works silently in the background to block fraudulent emails from reaching users with no impact on performance.

Why choose MAPLE?

Enterprise level service for **a fraction of the investment**

Highly skilled team with 25 years of delivering services to customers worldwide

Bespoke, fully transparent service

Maple's data centres are **ISO27001** & **ISO9001** certified, **Government OFFICIAL** and **NHS N3 certified**

THE DETAIL

Is it the **right** service for you?

- Have one of your employees fallen victim to these types of attacks (sent money, W2s, etc.)
- Are you using **Office 365**?

- **Have you been hit with spear phishing attacks** - including CEO or other exec impersonations?
- Are you **currently protecting your users** from targeted attacks like spear phishing?

Key features

- Real-time protection against targeted attacks like spear phishing and cyber fraud.
- Utilises AI to predict and prevent future attacks-unique in the market.
- Domain fraud protection using DMARC authentication and visibility.
- Simulated spear phishing training for high-risk individuals.

- Direct connection to Office 365 via API - no impact on network performance or user experience.
- Easy to deploy and manage - set-up takes less than five minutes.
- Works with any email security solution (Essentials, Exchange Online Protection, others).
