

CLOUD RECOVERY

Disaster Recovery and High Availability in the cloud

Introducing Cloud Recovery

Cloud Recovery is the provision of a flexible, cloud based, disaster recovery or high availability solution for Power i, UNIX and Linux systems. Using industry leading software tools your environment can be replicated to our cloud infrastructure, allowing for significant improvements in the speed and simplicity of recovery. It is also capable of further reducing recovery time objectives for mission critical applications.

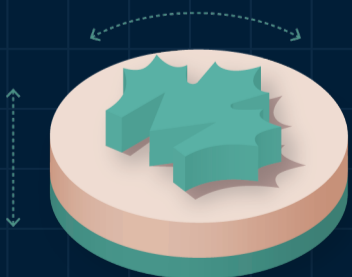

Key Benefits

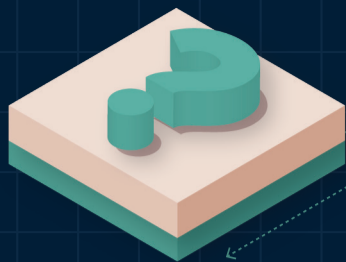

- Reduced direct costs of recovery servers
- No hardware purchase required
- No software purchase required
- Handles tougher RPOs and RTOs
- Flexible contract terms, with no long-term commitment required
- 24/7/365 support with agreed SLA levels
- High levels of connectivity & network reliability
- Smooth and efficient transition to new solution
- Graduated level of service implementation
- Provides a rapid return on investment

Why choose MAPLE?

- Enterprise level service for **a fraction of the investment**
- Highly skilled team** with 25 years of delivering services to customers worldwide
- Bespoke, fully transparent** service
- Allocated Service Delivery Manager** will look after your account and help you get the most from your service
- Maple's data centres are **ISO27001 & ISO9001** certified, **Government OFFICIAL** and **NHS N3** certified

THE DETAIL

Is it the **right** service for you?

Are you without a suitable secondary computer room or data centre location for disaster recovery purposes?

Are you under pressure to provide a better RPO and RTO for your key business applications?

Do you want the benefit of DR and HA without the CAPEX headache?

Do you have computer room or data centre issues, such as power outages, capacity restrictions, or environmental risks such as fire or flood?

Key features

Systems replication using market leading software tools

Simplifies HA/DR management & monitoring

Power systems replication (i, AIX and/or Linux)

x86 and Linux replication

Fast, reliable replication technology

Little or no overhead on source system

A single solution for the entire infrastructure

Zero hardware footprint on customer site

Optional: Backups can be performed from recovery mirror

SLA

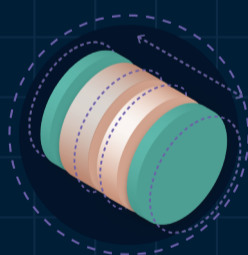

Recovery point objective

Near zero

Recovery time objective

≤ 2 hours
or as required

Complimentary services

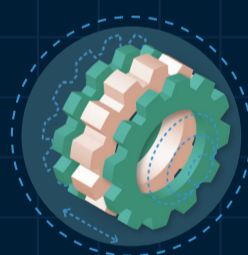

Storage As A Service

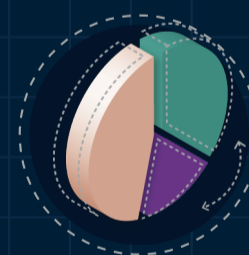

Backup As A Service

Platform As A Service

Systems Management

Systems Monitoring
